

SILK STRETCH EQUIPMENT

GGMG

Silk Stretching Equipment is designed for over the frame of the filter, silk stretched which form is manual, as to required tightness of silk strikes or sticks over the frame. Carrier of the conservative pliers is a rail, which two corners are fixed and other two corners setting the mechanical tightness of the silk, whole length of the rail by the help of the stretching arm. It has double or single form according to dimensions of frame. Flow will be more fluid, because the stretched holes of the silk shape will be square, thus filter capability will be high and successful. Silk stretching equipment has maximum frame dimensions. Special production is made in different dimensions.
